Allowable Subject Matter

Claims 4, 6, 14, 17, 21, 24 and 32 are allowed.

The following is an examiner's statement of reasons for allowance:

Independent claims 6, 14 and 17, when considered as a whole, are allowable over the prior arts of record. The prior arts of record do not teach or suggest the combination of means, arranged and interacted to perform the step of control codes for programmable remote supplied in XML format.

Specially, Kubischta et al. teach enable a user to specify to a server on the internet at least one apparatus to be controlled by the universal remote (0019, "the EPG displayed on the remote control can be obtained from a network, such as internet"), the server on the internet including a database of control code sets (0027, "a database 109 containing schedule information for television programming may be stored within one or more of the headends 104, network centers 106, the Internet 108...The database 109 may include, for example, program channels, dates, times, critical reviews, content ratings, VCRPlus.RTM. codes, and the like"), each apparatus having a corresponding dedicated proprietary remote with a control panel (figure 2); further wherein each control code set in the database corresponds to a given dedicated proprietary remote control device (0027, "a database 109 containing schedule information for television programming may be stored within one or more of the headends 104, network centers 106, the Internet 108...The database 109 may include, for example, program channels, dates, times, critical reviews, content ratings, VCRPlus.RTM. codes, and the like");

Art Unit: 2175

enabling the server on the internet to identify a control code set corresponding to each specified apparatus to be controlled and to provide the control code set as data in a mark-up language format (0073, “the online EPG 604 can be provided as a hypertext markup language (HTML) file”);

providing each identified control code set over the internet to a home network, the mark-up language format control code set including a code set representative of commands to control a state of the specified apparatus (0024, “an STB 102 receives encoded television signals from the network 100 and decodes the same for display on the television. Additionally, an STB 102 receives commands from a user (via a remote control in one embodiment) and transmits such commands back to the network 100”);

Kubischta et al. teach downloading the control code set in XML language into the remote control to control the specified apparatus (0073, “the online EPG 604 (and associated television program schedule information) can be provided using other formats and/or protocols, such as file transfer protocol (FTP), transmission control protocol/Internet protocol (TCP/IP), user datagram protocol (UDP), extensible markup language (XML) format,”); the IR/RF transmission (0032), using the soft keys of the displayed control panel on the touch screen GUI of the universal programmable remote control device to enable the universal remote to send commands to the specified apparatus via the IR or RF transmission (0032).

However, none of the references teach the feature of a touch screen GUI to display a graphical representation of the actual control panel hard keys of the dedicated proprietary remote control device of the specified apparatus to be controlled to thereby

Art Unit: 2175

enable quick recognition of the dedicated proprietary remote control device while manipulating the universal programmable remote control device.

With such limitations, the Examiner deems this application in condition for allowance over the prior arts made of record.
